

**ABSTRACT OF THE DISCLOSURE**

5       A pole anchor footing system for effectively supporting a post structure within  
6   a ground surface. The pole anchor footing system includes a resilient body having a  
7   neck portion and a base portion, and an elongate member extending into the body from  
8   an upper end of the body. The body is securely positionable within a ground surface.  
9   The neck portion receives a coupler that mechanically connects a post to the body.  
10   The base portion has an upwardly tapered structure with the lower end having a broad  
11   structure. A plurality of engaging members may extend outwardly from the body for  
12   providing additional gripping while positioned within the ground surface.
